

Asset Transfer Policy

Document ID: POL-002 | Version: 1.8 | Effective Date: March 15, 2024 | Owner: IT & Operations

1. Purpose

This policy governs the internal and external transfer of company-owned assets. It ensures that all movements of assets are properly documented, authorized, and recorded in the Asset Management System to maintain accurate inventory and accountability.

2. Types of Transfers

Internal Transfer: Movement of an asset between employees, departments, or office locations within Acme Corp.

External Transfer: Temporary or permanent transfer of an asset to a third-party vendor, client site, or partner organization.

Disposal Transfer: Transfer of an asset for disposal, donation, or sale at end-of-life.

3. Pre-Transfer Requirements

Before any asset transfer is initiated, the following must be completed:

- Current custodian submits a Transfer Request Form (TRF) in the AMS portal
- Line manager of both sender and receiver must approve the transfer
- Asset condition must be documented with photographs for Category A assets
- IT department must wipe and re-image devices containing sensitive data
- Updated asset tag must be affixed if the asset moves to a different office

4. Transfer Procedure

1. Initiating Transfer: The current custodian logs into AMS and creates a Transfer Request, specifying the receiving party, reason for transfer, and expected transfer date.
2. Approval: The request routes automatically to both managers. Approval must be granted within 5 business days, after which the request expires.
3. Physical Handover: The asset is physically handed over with a signed Transfer Acknowledgment Form (TAF).
4. AMS Update: The IT/Operations team updates the asset record within 24 hours of the handover.

5. Confirmation: Both parties receive an automated email confirmation from AMS with the updated asset record.

5. External Transfers

For assets leaving company premises, additional requirements apply:

- Approval from department head and IT Security is mandatory
- A loan agreement must be signed for temporary external transfers
- Assets must be insured during transit for Category A items
- Return date must be specified; extensions require a new approval cycle
- Customs documentation required for international transfers

6. Disposal and End-of-Life Transfers

Assets reaching end-of-life must be processed through the approved e-waste vendor. Data-bearing devices must receive IT-certified data destruction before disposal. A Disposal Certificate must be retained for audit purposes for a minimum of 5 years.

7. Non-Compliance

Unauthorized transfers or failure to complete documentation will result in the custodian being held responsible for the asset until the record is rectified. Repeated violations may result in disciplinary action.
